

The **OASIS-Complete** Webinar Series

Putting It All Together

Five Certified Webinar Trainings from the Fazzi OASIS Competency Institute

Mastering the OASIS Skin Assessment

OASIS wound questions continue to be some of the most frequently missed items on Fazzi's OASIS Skills Assessment Testing. When is a wound newly epithelialized? Granulating? A scar? Open or closed? Healed? Get the information you need to successfully complete these items in this webinar session.

Drug Regimen Review from Assessment Through Management

What is a Drug Regimen Review? What are potentially clinically significant problems? Whose responsibility is it? How does the management of oral and injectable medications relate to the drug regimen review and the patient's plan of care? Answers to these and other related questions will be provided during this session.

Mastering M2250 POC Synopsis and M2400 POC Interventions

Home care has always been about uncovering patient problems, planning care, and intervening to improve the patient's ability to manage his/her problems. Learn to use these evidence-based practices in care planning and care implementation to reduce your patient's risk of complications and improve his/her ability to stay safely at home.

Selecting Clinically Relevant and Fiscally Appropriate Diagnoses

Several OASIS items require a listing of diagnoses which communicate patient acuity, medical complexity, and drive the Plan of Care. In this webinar participants will learn to use the instructions from the OASIS and Medicare manuals to critically think and select the most appropriate diagnosis statements for OASIS items M1010, M1012, M1016, M1020, M1022, and M1024.

The Functional Activity Assessment from the Caregiver's Perspective

Functional deficits are defined by the amount of equipment, assistive devices, or human intervention required to perform a task safely. There is no difference in selecting OASIS responses if a patient lives alone or has a caregiver, but there will be a difference in care planning. Coordinated management of functional activity among nurses and therapists is key to improved patient outcomes. Select accurate OASIS responses by learning to look at them from a caregiver's perspective.
